

Problem Statement:

Right now, there is no complete solution which enables a person to keep track of its daily expenses easily and free of cost. For this, a person has to keep a log in a diary or in device notes, also all the calculations needs to be done by the user which are more prone to errors leading to miscalculations.

This project is an attempt to manage our daily expenses in a more efficient and manageable way. Sometime we can't remember where our money goes.

Hence, we need a solution that everyone can manage their expenses. So we decided to find an easier way to get rid of this problem. Our application attempts as much as possible to free the user from the burden of manual calculations and to keep track of the expenditure.

Instead of keeping a diary or a log of the expenses, this application enables the user to not just keep the control on the expenses but also can manage their expenses on a daily, weekly and monthly basis. Users can insert and delete transactions as well as can generate and save their reports. It also alerts the users on overspending since they will have an option of setting a limit on any particular expense they make.

The graphical representation of the application is the main part of the system as it appeals to the user more convenient and is easy to understand.
